## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

Claims 3-18 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. Three out of Four conditions said to be critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). The conditions necessary for performing the process most efficiently are not claimed, including the use of pure water, the acid is very pure (only sulfuric acid is disclosed, however, the claims are broader and unclear whether the same results would be obtained by the use of another acid) and the acid/water mixture must be agitated during dissociation of the acid.

In Claim 12, wouldn't the solubility of the calcium compound decrease by the chilling, since the specification discloses the chilling of the oxidized calcium mixture (see page 21)? Isn't the addition of the surfactant essential (to be in claim 3), since the specification discloses such an addition and not as a option.

Claim 3 recites the limitation "said polyprotic acid" in step (ii). There is insufficient antecedent basis for this limitation in the claim.

*Election/Restrictions*

Claims 1-2 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 10/26/07.

Applicant's election with traverse of the product and different method in the reply filed on 10/26/07 is acknowledged. The traversal is on the ground(s) that there is no other way of forming the claimed compound. This is not found persuasive because the prior art cited in the specification discloses that the compound would be formed and would have be short lived.

The other method is different and not merely a variation, because the preamble states that one is the complete dissociation of polyprotic acid in water and the other is the formation of a different compound. It is unclear how these two different objectives can be said to variations, merely because some of the steps may overlap.

The requirement is still deemed proper and is therefore made FINAL.
